#### Product

Efflorescence and Scale Cleaner

#### Features

This product effectively removes stains, cement residues, water scale, efflorescence, water marks, yellow stains, and mold from stone and hard surfaces. It cleans without damaging the stone's surface gloss, can be used at room temperature, leaves no pigment residues in the stone, and has no adverse effects on the stone itself.

#### Range of Application

Designed for removing lime residues, cement residues, and thin cement layers from marble, granite, sandstone slabs, anti-slip stone slabs, concrete, terrazzo, ceramic tiles, and hard bricks. It is also suitable for cleaning stone surfaces in kitchens, bathrooms, swimming pools, and exhibition halls.

#### Method of Application

Dilute the product with water at a ratio of 1:1 to 1:5, depending on the severity of contamination. First, pre-wet the stone surface, then apply the diluted solution evenly. Cover the treated area with plastic wrap after application. After 5–30 minutes, scrub vigorously with a brush or floor scrubber. Rinse thoroughly with water after cleaning. For stubborn stains that remain, repeat the process until satisfactory results are achieved.
